

Borrego Solar Program

- Each year the Town uses approximately 1.8 million kilowatt hours (kWh) of electricity.
- In 2105 the Town signed a 25-year power purchase agreement with Borrego Solar, a firm that develops custom solar solutions for large scale energy users; one in Freetown and one in Carver.
- Through these contracts, the Town has agreed to purchase 2.7 million kWh of net metering credits generated at those two sites.
- The Town then pays Eversource with these credits to cover about 90% of the Town's electricity requirements at a substantial savings.
